Future Defined. **ACCRETECH.**

ACCRETECH is one of the world´s leading manufacturers of semiconductor production equipment as well as form and surface measuring systems. It is headquartered in Tokyo, Japan. From our European headquarters in Munich, Germany and branches in France and Italy, we oversee the entire European and Southern American market through a network of sales and customer service points.

Our high-profile customers recognize us as competent partners in the development of individual solutions tailored to their specific needs. Our lasting success is guaranteed by a high level of reliability and innovation of the systems offered.

In the context of our further expansion in the field of measuring systems, we are currently seeking for our headquarters in **Munich, Germany** a professionally experienced

Software Development Engineer (m/f),
business fluent in Japanese

As a member of an international team of specialists, your task will be to develop custom software functions & applications which are specifically requested by our European customers. Thus, you will enhance our proprietary software by additional functions and building blocks like new analysis functions, measurement procedures and automation features. You report directly to the Research & Development Manager.

These new software functions & applications will have to be integrated into the main system software which is developed and maintained in our Japanese HQ. A close alignment with the development group in Japan is therefore required, which requires a business fluent command of Japanese. A command of Englisch at conversation level is required in addition.
Even though your home base will be the Munich office, your initial training and introduction into the main software will be conducted in the Japanese HQ. We expect this to require between two and four months, a time period during which you will be temporarily dispatched to our Japanese HQ.

You hold the qualification of either a professional education OR a degree in Software Engineering or in Automation technology, you have a minimum of three-years' working experience in the field of software development, and you have proven skills and a solid work experience in C++/C# and in PLC (SPS) Programming. A willingness to travel occasionally (upon your return from your initial training in Japan), a self-motivated attitude to work, the ability to team work and good English speaking skills are further requirements.

We offer you a position with a diverse range of activities in a highly motivated team, opportunities for personal and professional growth, an attractive salary and a company car also for private usage.

If we managed to raise your interest, please send us your application material including your earliest possible starting date and your expected salary to the following address:
